

# Problems with Windows 7 or higher

## Problems with Windows 7 or higher

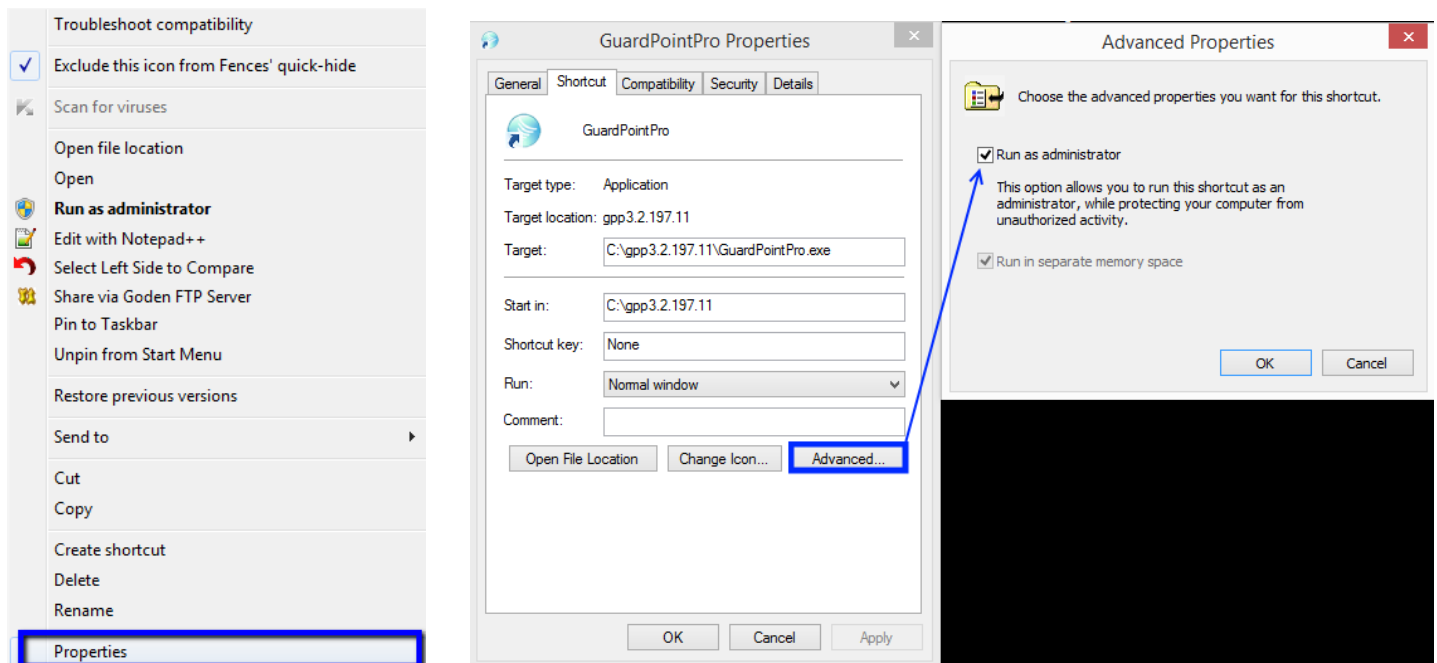

Due to higher security rules in Windows 7 or higher, you should start GuardPointPro by right-click on the application shortcut icon and select the option "Run as administrator" (see attached image).

Otherwise, it is possible that Windows does not modify the original application files but creates them in a temporary directory instead.

## Problems with Windows 7 or higher

In order to keep these settings permanently, right-click the shortcut, select Properties>Advanced and set "Run As Admin" as shown in the following images:

Another point, the USER ACCOUNT CONTROL should be disabled in the "Control Panel>Users>Change User Account Control settings".

Choose "Never notify" and restart the PC
