

Circle Health

Case Study - Health

Client : Circle Health
Installer : Trinity Protection Systems
Type of System : GuardPoint PRO integrated Access Control Solution
Type of Site : Health
System Description : GuardPoint Pro

The Client

Circle is an employee co-owned partnership with a social mission to make healthcare simpler, better and smarter value for patients. They form the largest partnership of healthcare professionals in Europe. Circle is co-founded, co-run and co-owned by clinicians. Because the consultants and healthcare professionals who work for Circle own the facilities they work in, they are empowered to put patients first in everything that they do.

The Situation

The new hospital required a 40 door access control solution to meet with a tough technical requirement and fit with the modern style of the new hospital.

There were also an additional 27 internal low security doors that a separate low cost solution was being considered for.

The Solution

The main 40 doors of the system are now being controlled by a GuardPoint Pro system, ensuring authorised entrants only ensuring patient and staff safety.

For the internal doors which it was important to control, 27 wireless cylinder locks were installed. These are all managed from GPP and offered the client a more cost efficient option where a lower security functions were required.

Highlights

With a number of doors not that were originally planned to be managed under a separate system, the Guardpoint Pro also now manage these utilising wireless cylinder locks that are operated with the same cards used for the main system. This means the hospital now only have one front end and one system to administer.

The Benefits

The wireless cylinder locks have provided a clean easy install for the internal doors with no structural alterations to the door. This has provided a fully integrated lower cost option for the client. They also offer a great energy efficiency for the hospital.

Products Used

GuardPoint PRO Software

Alarm Control Module, Workstations

IC-2000JX

2-door/4-reader access controller with Flash Memory, 8 inputs, 4 relay outputs, 20,000 card holders.

IC-4000JZ

4-door/4-reader access controller with Flash Memory, 8 inputs, 4 relay outputs, 20,000 card holders.
