New

- **Video support has been added for Qognify's NVRs:** Since Qognify acquired OnSSI Group with its brands OnSSI and SeeTec, the NVR setup of the more recent versions of the company's NVRs (Ocularis, SeeTec) has changed. We now also support **Qognify's Cayuga** NVR brand.

  - While defining an older version of **Ocularis** in GuardPoint10's NVR/DVR screen, select **Onssi** from the drop-down list of NVR types. Then close the GuardPoint10 GUI, and run the **./GuardPoint10/Gui/Onssi.bat**

  - While defining **SeeTec**, **Cayuga**, or a newer version of **Ocularis** in GuardPoint10's NVR/DVR screen, select **Qognify** from the drop-down list of NVR types. Then close the GuardPoint10 GUI, and run the **./GuardPoint10/Gui/Qognify.bat** file.

Enhancements

1. The T&A Roll Call now includes **column filters**. These filters are also applied to the Tile view.

2. The Visitor Module now has **French language** support.

3. The GuardPoint10 license now has **two additional module options**:

   - **Active Directory**: When you log in to Windows with a Username and Password the Username and Password credentials are validated via the Windows Active Directory.

   - **MultiSplit**: MultiSplit makes the GuardPoint10 system more efficient via distributed computing to split the workload between multiple machines or servers on the same machine. MultiSplit is best used for large or growing GuardPoint10 systems.
   The **Active Directory** and **MultiSplit** modules are, by default, in the GuardPoint10 Demo application.

Bug Fixes

1. **Fixed**: While adding relays to a **Lift Access Group**, all relays that should be available are now available.

2. **Fixed Galaxy panel zones** can now be shared properly in a **MultiSite** environment.

3. **Fixed**: **Lift relays** will now fire consistently when the LAG comes from a **restored database**.

4. **Fixed**: **Local reflexes** now work reliably.

5. **Fixed**: **Cardholder details** added in a previous GuardPoint10 version now open reliably after a GuardPoint10 upgrade.

6. **Fixed**: Cardholder details, where a text field value ends with a **whitespace** no longer results in a GUI crash after clicking a Save button.

7. **Fixed**: Cardholder details' **Personal Lift Access Group** now works with a Mitsubishi ELSGW Lift Access Group.

8. **Fixed**: Editing a previously saved **Mitsubishi ELSGW Lift Access Group** will now have an enabled Save button.

More information about the Enhancements and Improvements in this release may be found in the Online Help.
